

UNEMPLOYMENT ANALYSIS IN INDIA

Modules Used:

- Tkinter
- Pymongo
- Pillow
- Seaborn
- Matplotlib

Functionalities:

In this program we use various module like seaborn, matplotlib to model a graph from the dataset stored in MongoDB. Through this function we can analyze the unemployment rate for each state efficiently. GUIs such as tkinter is also used so that users with little technical knowledge can run this program. Pillow is also used to provide the interpreter with image editing capabilities.
